PHARMA

Targeted Relief from Pain, Inflammation and Swelling

Aceflexa™ SP

Rx

Aceclofenac, Paracetamol & Serratiopeptidase Tablets

Analgesic

Anti-Inflammatory

Anti-Edema

MECHANISM OF ACTION

Aceflexa SP combines three complementary actions:

- **Aceclofenac:** Inhibits prostaglandin synthesis to reduce inflammation & pain
- **Paracetamol:** Provides central analgesic action for effective pain control
- **Serratiopeptidase:** Reduces inflammatory edema and promotes faster resolution of swelling

KEY CLINICAL ADVANTAGES

- Dual analgesic and anti-inflammatory action
- Effective control of inflammatory edema
- Well tolerated in recommended doses
- Suitable for orthopedic & post-surgical pain
- Improves patient comfort and compliance
