Rx

Deflazacort Tablets 6 mg

Anti-Inflammatory

Immunosuppressive

Steroid Therapy

Deflaxa 6 contains Deflazacort, a systemic corticosteroid with potent anti-inflammatory and immunosuppressive activity. It is widely used in the management of inflammatory, autoimmune, allergic, and respiratory conditions where rapid and sustained inflammation control is essential.

MECHANISM OF ACTION

Deflaxa 6 acts through corticosteroid-mediated pathways:

- **Deflazacort:** Inhibits multiple inflammatory mediators, suppresses leukocyte migration, reduces capillary permeability, and modulates immune response to control inflammation and hypersensitivity reactions

KEY CLINICAL ADVANTAGES

- Potent anti-inflammatory efficacy
- Broad therapeutic applicability across specialties
- Helps prevent progression of inflammatory tissue damage
- Improves symptom control and patient outcomes
- Well established steroid therapy under medical supervision
