

Pantopax™ 40

Rx Pantoprazole Tablets IP 40 mg

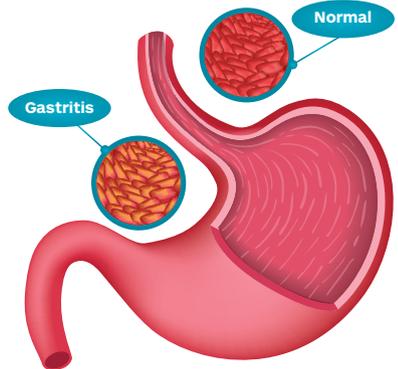

For Rapid & Sustained Gastric Protection

Pantopax 40 contains Pantoprazole, a proton pump inhibitor (PPI) that provides effective and long-lasting suppression of gastric acid secretion. It is indicated in acid-related gastrointestinal disorders requiring reliable symptom control and mucosal healing.

INDICATIONS

- ✓ Gastroesophageal reflux disease (GERD)
- ✓ Erosive esophagitis, Peptic ulcer disease
- ✓ Zollinger–Ellison syndrome
- ✓ NSAID-induced gastric irritation
- ✓ Acid-related dyspepsia

Gastric Acid

Pantopax
40

Pantopax 40 contains Pantoprazole, a proton pump inhibitor (PPI) that provides effective and long-lasting suppression of gastric acid secretion. It is indicated in acid-related gastrointestinal disorders requiring reliable symptom control and mucosal healing.

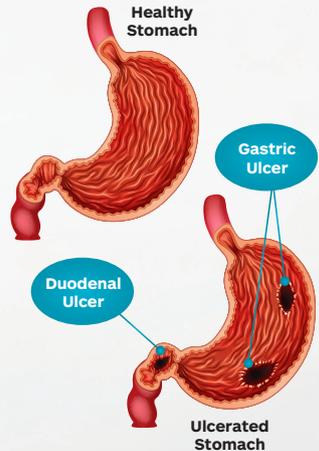

MECHANISM OF ACTION

Pantopax 40 provides targeted acid control through:

- **Pantoprazole:** Irreversibly inhibits the gastric H^+/K^+ -ATPase (proton pump) in parietal cells, thereby reducing basal and stimulated gastric acid secretion

KEY CLINICAL ADVANTAGES

- Once-daily dosing for improved compliance
- Consistent acid suppression over 24 hours
- Supports ulcer healing and relapse prevention
- Suitable for maintenance therapy under supervision
- Widely accepted standard of care in acid disorders
