

Paxclav™ 625

Rx

Amoxicillin and Potassium Clavulanate
Tablets IP 625 mg

A Strong Defense Against Infection

Enhanced Protection with β -Lactamase Inhibition

A broad-spectrum antibiotic combination of amoxicillin and potassium clavulanate that provides effective coverage against beta- lactamase- producing organisms, ensuring reliable treatment of a wide range of bacterial infections.

INDICATIONS

- ✓ Respiratory tract infections
- ✓ Ear, nose, and throat infections
- ✓ Urinary tract infections
- ✓ Skin and soft tissue infections
- ✓ Dental infections
- ✓ Bone and joint infections

Against Resistant Bacterial Infections

Paxclav™ 625

TABLETS

Rx

Amoxicillin and Potassium Clavulanate Tablets IP 625 mg

Paxclav 625 is a proven combination of Amoxicillin and Potassium Clavulanate, formulated to deliver broad-spectrum antibacterial activity, including coverage against β -lactamase-producing organisms.

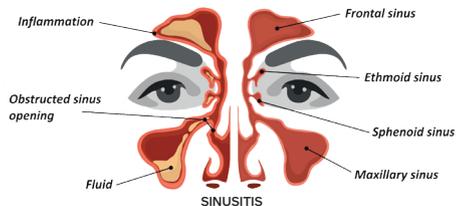

MECHANISM OF ACTION

Paxclav 625 works through a synergistic antibacterial mechanism:

- **Amoxicillin:** A β -lactam antibiotic that inhibits bacterial cell wall synthesis, leading to bacterial cell death
- **Clavulanic Acid:** A β -lactamase inhibitor that protects amoxicillin from enzymatic degradation, restoring and enhancing antibacterial activity

KEY CLINICAL ADVANTAGES

- Expanded antibacterial spectrum
- Effective in resistant infections
- Reduces treatment failure rates
- Widely accepted first-line combination
